SUMMARY

Cloud Engineer with hands-on experience designing and deploying secure, production-grade infrastructure on AWS and GCP. Skilled in Terraform, CI/CD automation, containerization, and event-driven architectures. Built 4+ end-to-end cloud systems with real-time monitoring, DevSecOps practices, and infrastructure automation.

TECHNICAL SKILLS

Domain	Technologies
Cloud Platforms	AWS ,Google Cloud Platform
Infrastructure as Code	Terraform
CI/CD & DevSecOps	GitHub Actions · TFLint · Checkov · Trivy
Containers & Compute	Docker · Cloud Run · Lambda
Networking	VPC · Cloud NAT · Load Balancers · CloudFront
Monitoring & Observability	Cloud Monitoring · CloudWatch · SNS
Security	IAM · KMS · Secret Manager · Workload Identity Federation

Languages & Frameworks	Python · FastAPI · Boto3 · SQLAlchemy · pytest

PROJECTS

☁ CloudPulse — Cloud-Native Uptime Monitoring Platform

Google Cloud Platform · GitHub
A serverless uptime monitoring service that continuously monitors website and API health, tracks response times, calculates uptime percentages, and sends automated alerts when services go down.

- Designed a serverless uptime monitoring platform using Cloud Run, Cloud SQL (private IP), and global HTTP(S) load balancing
- Built modular Terraform infrastructure (59 resources across 12 modules), enabling full environment deployment in under 15 minutes
- Implemented a 4-stage CI/CD pipeline with GitHub Actions using Workload Identity Federation (OIDC, no stored secrets)
- Developed real-time alerting system using custom metrics and automated notifications with <60-second detection time
- Enforced security best practices including private database access, least-privilege IAM, VPC isolation, and secure secret management

💰 Automated AWS Cost Calculator & Alerting System

Amazon Web Services · GitHub

An end-to-end serverless cost monitoring platform that provides real-time AWS cost visibility through a dynamic dashboard and proactive budget alerting — solving the "surprise cloud bill" problem.

- Built a serverless cost monitoring system using Lambda, API Gateway, CloudFront, and S3 with dynamic dashboard visualization
- Implemented proactive budget alerting via CloudWatch and SNS, reducing risk of unexpected cloud costs
- Automated weekly cost reports using SES and integrated Cost Explorer for detailed service-level insights

- Designed reusable Terraform modules for scalable infrastructure deployment and version control
- Integrated DevSecOps pipeline with Checkov, TFLint, and automated CI/CD deployment

🔄 Advanced Event-Driven S3 Backup System

Amazon Web Services · GitHub

An automated disaster recovery system that replicates S3 objects across AWS regions, validates backup integrity via checksum comparison, and alerts operators on failures — all without human intervention.

- Designed a fully event-driven backup system using S3, EventBridge, SQS, and Lambda for cross-region replication
- Implemented checksum-based data validation and retry mechanisms to ensure backup integrity
- Applied resilience patterns including SQS buffering, Dead Letter Queues, and automated failure notifications via SNS
- Secured infrastructure with KMS encryption and enforced zero public access across all storage resources
- Automated deployment and validation using Terraform and CI/CD pipelines

🤖 The Meeting Analyst — AI-Powered Transcription & Summarization Pipeline

Amazon Web Services · GitHub

An end-to-end AI pipeline that automatically transcribes meeting recordings using Amazon Transcribe and generates intelligent summaries with key decisions and action items using Generative AI (Amazon Bedrock / Meta Llama 3).

- Built an end-to-end AI pipeline using S3, Lambda, SQS, EventBridge, and DynamoDB for automated meeting processing
- Integrated Amazon Transcribe for speech-to-text and Bedrock (Llama 3) for intelligent summarization and action extraction

- Developed serverless REST API for retrieving structured meeting insights
- Designed asynchronous architecture for scalability and fault tolerance using event-driven patterns
- Managed infrastructure with Terraform and automated deployments via GitHub Actions

CERTIFICATIONS

Certification	Status
AWS Solutions Architect – Associate	Expected 2026

EDUCATION

Bachelor of Science in Information Technology (3rd Year Student) Mekelle University · Expected Graduation: 2027

ADDITIONAL

- **Multi-Cloud:** Demonstrated proficiency across both **AWS** (4 projects) and **GCP** (1 project) with Terraform as a unified IaC layer
- **Documentation:** Every project includes professional Architecture Decision Records (ADRs), operations runbooks, and Mermaid architecture diagrams
- **Open Source:** All projects publicly available with comprehensive README documentation on GitHub
